

HERBICIDE USE IN SCHOOLS

BY AUDREY PERIC-LOW

THE WEEDS NETWORK'S LITTLE HELPER

MY SCHOOL

As part of the weeds network I know what herbicides looks like and the cause of it but many at my school don't. Some of my friends use grass growing near a shed to keep their drink bottles cool. Later on in the year our school came and herbicided this grass. Without any knowledge of the toxicity of this chemical my friends continued to place their bottles there.

No known graph has been made to show the use of herbicides in schools. This shows that people don't want to tell us what harsh chemical they use or how much they spend of the schools funds on herbicides.

RESOLUTION

After hearing about the use of herbicides at my school, dad went to speak to our principal about smarter ways to manage weeds. Our school now uses whipper snippers as a way to control weeds.

Thank you
