

## Present distribution of *Cytisus multiflorus* in Victoria

**Species:** *Cytisus multiflorus* (L'Hér.) Sweet  
**Common name:** white Spanish broom  
**Status:** Not declared in Victoria

**Habitat:** In Victoria, this plant naturalised following an ornamental planting on a lakeside in central Victoria. It has since spread along roadsides and into townships (Weeds CRC). In New Zealand, it occurs on the South Island in dry waste places, scrubland and riverbeds (Webb *et al* 1988). Within its native range in the Mediterranean region it occurs as one of the representative species in woodlands and scrublands (Rodriguez-Riaño *et al* 2004).

Present distribution in Victoria using Victorian Flora Information System (FIS). There are no records of this species in IPMS.
